OM5 Active[®] Sales Tutorial

I. Body-Activated Motion

- The OM5 Active's beauty is in the way the chair adjusts to the user and its design simplicity.
- OM5 Active's motion, allows for open body angles, resulting in improved circulation for the user.
- Flexible nylon uni-shell with fiberglass for optimal durability and comfort.
- OM5 Active's entire lineup features a chair top that entirely articulates — the seat **and** the back open up to create a uniquely smooth, and comfortable, active sitting experience.

The pivot point location extends upwards near the chair's lumbar, to mimic the natural pivot point in the human body, the hips.

The synchronized motion of the back and seat are balanced in perfect harmony.

II. Colors and Finishes

- Because OM5's beauty is in its simplicity, the color palette is also sophisticated and modern. Mix and match between PolyFlex shell colors and upholstery options.

Designed by Francisco Romero of Phidesign

Phidesign, founded in 2004, is a furniture design studio that specializes in high performance Task, Executive, and Guest seating for the commercial market. Led by industrial designer and engineer Francisco Romero, and Graphic Designer Nadine Bosshard Romero, they have carved a niche in value driven markets by designing innovative products in a socially and economically responsible way.

Francisco received his Bachelor of Science degree in Applied Mathematics and then went on to receive his Master's degree in Architecture, both from UCLA.

Nadine studied at the famed Art Center College of Design in both Switzerland and Pasadena.
